Veritone aiWARE

The Operating System for **Artificial Intelligence**

Hi Wayne,

Manually sifting through hundreds, if not thousands, of known offender records to identify suspects is labor-intensive and time-consuming. But those days are gone now! Veritone IDentify is here to empower police departments and agencies to take full advantage of their databases with the use of facial recognition.

Veritone IDentify uses facial recognition technology to systematically compare known offender and person of interest databases with video and photographic evidence to quickly identify suspects for further investigation. Automating the identification process not only increases productivity but also increases match rates to accelerate investigations.

Click the button below to download a one-sheet outlining all of Veritone IDentify's features and functionality.
